

NAVYA SANNIBOINA

Operations Analyst · Business Analyst · Data Analyst

California, USA · (940) 594-5019 · sanniboinanavya98@gmail.com · linkedin.com/in/navya-s-6a784b34a

SUMMARY

Operations and business analyst with 2+ years across fraud, claims and risk operations in banking and consulting operations, backed by an M.S. in Business Analytics (GPA 3.7) and an M.B.A. in Finance. Cut claim resolution time 22% at Wells Fargo by partnering across risk, legal, finance and compliance to close evidence gaps. Builds the SQL, Power BI and Python reporting layer that turns transaction, case and operational data into decisions — including documented metric definitions and validated, AI-accelerated automation. Comfortable presenting findings to risk, compliance and executive audiences.

CORE COMPETENCIES

Fraud & Claims Analytics · Transaction Monitoring · Risk & Compliance Reporting · KPI & Metric Definition · Dashboard Development · Data Validation & Reconciliation · Root-Cause Analysis · Process Improvement · Requirements Gathering · Audit & Examination Readiness · Self-Service Analytics Enablement · Stakeholder Management

TECHNICAL SKILLS

Analytics & Querying: SQL (joins, CTEs, window functions, query optimization), Python (pandas, NumPy), Advanced Excel (Power Query, pivot tables, XLOOKUP)

BI & Reporting: Power BI (DAX), Tableau, automated reporting, KPI & metric definition, data dictionaries, executive reporting packs

Risk & Compliance: Fraud typologies, transaction monitoring, claims & dispute investigation, case documentation, internal controls, audit & examination readiness, BSA/AML awareness

Analysis Methods: Trend & variance analysis, hypothesis testing, A/B testing, segmentation, forecasting, precision/recall threshold tuning, data validation & reconciliation

Data & Cloud: Snowflake, BigQuery, Git, ETL/ELT concepts, star-schema data modeling, dbt (foundational)

Business Analysis: Requirements gathering, user stories, as-is/to-be process mapping, SOP documentation, UAT support, Jira, Confluence, Agile/Scrum

AI-Assisted Analysis: Claude, Cursor, GitHub Copilot — prompt design for SQL and Python drafting, with mandatory validation of every output against source data

PROFESSIONAL EXPERIENCE

Logic Leap Tech Inc.

Business Analyst

California, USA

May 2025 – Present

- Own weekly operations reporting across 25 active client engagements, consolidating timesheet, CRM and billing data into a single Power BI pack reviewed by leadership.
- Defined and documented canonical definitions for 12 operational KPIs in a shared glossary, so utilization and billing figures reconcile across every report and client review.
- Reconcile consultant timesheets against client purchase orders and invoices, surfacing billing discrepancies and recovering about \$12K in under-billed hours per quarter.
- Automated a recurring manual report in Excel Power Query and Python — drafted with AI coding assistants and validated line by line against source billing data — cutting preparation from about 6 hours to under 45 minutes weekly.
- Trained 15 non-technical account and delivery staff to self-serve from the Power BI dashboards, removing about 20 ad-hoc reporting requests a month.
- Coordinate across recruiting, finance, legal and client delivery to resolve engagement, documentation and compliance issues, presenting weekly status and exception summaries to operations leadership.

Wells Fargo

Fraud & Claims Operational Specialist

Hyderabad, India

Feb 2021 – Feb 2022

- Reviewed 70+ credit, loan and savings account transactions daily against fraud-indicator criteria, escalating unusual activity and claim discrepancies for investigation.

- Partnered with risk, legal, finance and compliance teams to validate claims and close evidence gaps, cutting average claim resolution time by **22%**.
- Investigated fraud and claims cases by reconciling customer records, transaction detail, supporting documents and case notes, sustaining 98% accuracy across quality-reviewed decisions.
- Identified recurring fraud typologies and process gaps across claim reviews and recommended control changes that reduced repeat claim issues by 15%.
- Tracked and reported fraud and claims KPIs — open case volume, claim turnaround time, recovery amounts, repeat-claim rate and emerging fraud trends — in monthly reporting packs for management and compliance.
- Presented monthly fraud trend and claims performance findings to operations managers and compliance reviewers, translating case-level detail into the two or three actions that mattered.
- Maintained audit-ready documentation for fraud reviews, claim decisions and regulatory requests, supporting quarterly internal audits and compliance reviews.

PROJECTS

Fraud Detection & Alert Triage Dashboard

2026

SQL, Python, Power BI

- Analysed 284,807 card transactions to profile fraud by amount band, time of day and channel, tuning alert thresholds to raise rule precision from 62% to 84% while holding recall at 91%.
- Built a Power BI dashboard tracking 8 fraud KPIs — alert volume, precision and recall, false-positive cost and loss per case — with every metric defined in a shared data dictionary so all views reconcile.
- Wrote a triage guide so a non-analyst reviewer could work the alert queue from the dashboard without analyst support.

Automated Claims Reporting & Reconciliation Pipeline

2026

Python, pandas, SQL, GitHub Actions

- Built a scheduled pipeline ingesting case and transaction extracts that runs 12 validation and reconciliation checks and fails loudly on schema or balance breaks, replacing a 5-hour manual monthly close with a 10-minute automated run.
- Drafted transformation logic with AI coding assistants and validated every output against source ledgers before release, documenting the verification steps in the repository README.

Fraud Typology Loss Analysis & Threshold Recommendation

2026

Python, statistics

- Tested which fraud typologies drive the highest loss per case across 40,000+ disputed transactions using chi-square tests and logistic regression, confirming significance at $p < 0.05$.
- Delivered a one-page recommendation memo for a risk-manager audience proposing a revised review threshold projected to cut false positives 18% at equal loss capture.

EDUCATION

M.S., Business Analytics

May 2025

University of North Texas, Denton, TX · GPA: 3.7/4.0

Relevant coursework: Predictive Analytics, Data Visualization, Database Management, Business Statistics, Decision Modeling

M.B.A., Finance

May 2020

Jawaharlal Nehru Technological University, Hyderabad, India

B.Com., Computers

May 2018

Osmania University, Hyderabad, India

CERTIFICATIONS

Microsoft Certified: Power BI Data Analyst Associate (PL-300) — *in progress, 2026*

Google Data Analytics Professional Certificate — Coursera
